

SIP2K10

School Improvement Plan 2010

SIP2K10: School Improvement Plan 2009 was released July 1, 2010 in conjunction with the 12th anniversary of Educational Vision And Networking Services, Inc.

SIP2K10 is a relational database application designed to facilitate and encourage development, and regular maintenance, of effective school improvement plans. It is designed to take advantage of structured planning, yet provides flexibility in the contents of improvement plans. **SIP2K10** is adaptable to individuals with a wide range of computer skills. The program is designed for ease of use without sacrificing key elements of effective planning.

SIP2K10 is the **fourth** generation of a school improvement planning tool developed by a former Associate Superintendent of a public school system in North Carolina. This release is designed to be more applicable to school districts beyond North Carolina and to address more of the of the “**No Child Left Behind**” requirements.

The design of **SIP2K10** provides a framework for assisting schools and school districts in a systematic process for developing and monitoring a comprehensive

sive strategic plan for continued growth and development.

One of the main features of **SIP2K10** is the ability to generate **multiple** categories of **action plans** through a **single** set of comprehensive **data entry**.

The **School Profile Data** section provides a tool for monitoring progress in a variety of categories. **SIP2K10** will provide more components designed for local flexibility in the amount and types of profile data schools can include with the plan.

Major Components

Main Switchboard - Primary distribution point of navigating through the **SIP2K10** software

Data Entry Switchboard - Gateway through which the various types of data are entered (school data, analysis of current practices, vision/mission/beliefs, goals, objectives, strategies, persons responsible, budget, timelines, comprehensive action plan, and profile data, etc.)

The data entry process is separated from the reporting process in order to facilitate more efficient data entry.

Reports Switchboard - Gateway through which various

reports are selected for viewing/printing (reports matching the various type of data entry elements, composite action plan printing, profile data elements, system defined reports, etc.)

The user can generate **26 or more types of action plans** with a **single set of data entry** (SIP, SACS, Safe School, Title I, Staff Development, etc.)

Administrator Switchboard - Gateway through which school improvement plan annual updates, or other data editing, can be done
